

DISPEX

Exclusive for Dispex Members

5% Discount on Vivitech's Dispens-IT Software and Equipment

What is Dispens-IT?

Vivitech's Dispens-IT software is designed for use within dispensing GP surgeries. Its primary function is to help eliminate dispensing errors in the dispensary, by making use of the barcodes that now appear on almost every item.

How does it work?

Quite simply, Dispens-IT intercepts and stores the details of each prescribed item as it is output from the surgery's clinical system and withholds the printing of the item label until dispensary staff have scanned the barcode of the item. If the barcode matches the item's description, the label is printed normally. If it does not, a warning message prompts the user to investigate.

Why does our dispensary need it?

- It creates a historical log of all items dispensed for traceability
- The software interfaces to EMIS, Vision, Synergy, SystemOne, Microtest and several other GP Clinical Systems
- Supports thermal printers for fast, silent and low cost labels (even if your existing system cannot print to thermal printers!)
